

One Day Training Program on Role of Safety In Enhancing Productivity In Industries

PERSPECTIVE

PDM has designed this training program for the first time on "Role of Safety in Enhancing Productivity in Industries", to guide the industries for their improvement in safety & Productivity.

Some of the advantages of linking health and safety to productivity are high quality working environment, good levels of co-operation between management and employees. It enable organizations to give challenges, responsibilities and job autonomy to employees. It causes development of new working postures, decreasing the strain of physical work, allowing creative solutions for specific safety and health problems. A though analysis of the different production costs that can be directly or indirectly related to health and safety hazards (costs of incidents, loss of productivity and quality) should be done by industries for improving their productivity.

There is a definite link between productivity and safety. They both are equality in the result of good management and good leadership. Safety is not a trade-off for productivity.

Participation certificates will be issued to the participants in person at the end of the program.

OBJECTIVES

To enable the participants,

- Understand the important of safety for improving productivity.
- Methods for improving the productivity by following workplace safety.

FOR WHOM

Fire officers, security officers, Safety officers and Management personnel responsible for fire Prevention and Protection.

TOPICS

- Overview of legal requirements on OH & S.
- management of Human Behaviour & Motivation for safety.
